

# COORDINATION AND COMMUNICATION

LEADNAV SYSTEMS LLC

Mission Planning, Navigation, Coordination, and Communication

## LN-IRIDIUM SERVICE

We have revolutionized coordination and communication with groundbreaking Iridium satellite integrations within LEADNAV and our cloud servers. Merging cellular and satellite platforms together with our system, we provide real-time group tracking and communication not only for command and control back home but between the actual units in the field. With worldwide tracking, SMS messaging and voice calling, “off the grid” to “off the grid”, you have a package that can be utilized and deployed worldwide.

## Standard Components

- Iridium GO! satellite hot spot  
*\*Programmed into our service*
- LN-IRIDIUM service
- Iridium GO! apps
- iPhone or iPad
- LEADNAV GPS app
- \*See LN-BLOWOUT and complete bundles*

## LN-COMMAND

- Web based command and control suite
- Asset tracking and private data/map hosting
- Situational reports from the field
- \*Available under LN-Enterprise*

## Features

- Worldwide communications via satellite voice calling and SMS messaging
- Worldwide real-time group tracking between all units while in the field
- LEADNAV GPS file sharing for up to date situational awareness and status updates from and between the operators in the field
- Stand-alone pinger option for tracking an asset while in the field
- Interoperability for tracking and communication between satellite and cellular/WiFi networks
- Photo and Document sharing via Iridium Mail client
- Up to the minute weather forecasts through supporting applications

*\*Private security and data hosting available*

See LN-BLOWOUT

## Benefits

Most systems only allow tracking to be monitored by someone back home in a cellular or WiFi environment. The time it takes to relay that information can be costly.

We provide the actual operators on the ground with tracking and communications between themselves, while they are making important decisions from the field.

Our system is world-wide without distance restrictions and requires little setup to join the group that is already operating remotely.

*Built for the operator by the operator to fill the needs of those who work and play “off the grid”*
